BUILDING MUSIC PLAYER SOFTWARE ON ANDROID PLATFORM 01/2024 - 03/2024

Student

Number of participants: 3
Technology used: Java, fire-base.
Position: Team leader.
Project description: Develop an Android music player application, providing a smooth, easy-to-use music listening experience, supporting offline music playback and playlist management.
Key features:

1. Offline music playback: Read and play music files (.mp3) from device memory.
2. Playlist management: Create, edit, delete playlists.
3. Song list: Display songs by name, artist, album.
4. Playback control: Play, pause, fast forward, repeat, shuffle.
5. Search: Find songs by keyword.
6. User interface: Display song information, cover art (if available).
